

So, we got

$$F_{el} = k \frac{|q_1||q_2|}{r^2}$$

multiplying both sides by r^2

$$r^2 * F_{el} = k * |q_1||q_2|$$

divide both sides by k

$$\frac{r^2 * F_{el}}{k} = |q_1||q_2|$$

So, how can I calculate this expression, since F_{el} is not defined.

What are the values of q_1 and q_2 ?
